OmniExpress

Qualcomm Enterprise Services Europe introduced a new color display for its communications system Omni Express. The new display makes it easier for the driver to read messages and other information like driving times. It also includes a powerful processor and flash memory for GPS maps. The display measures 18 cm, which is 4 times larger than the current screen.

Vos Logistics equips their fleet with OmniExpress

The Dutch logistics service provider Vos Logistics has its entire fleet equipped with the telematics system: Omni Express Qualcomm. The two companies thus strengthened their twenty-year partnership. Vos logistics uses Omni Express with the web portal FleetVisor and the "Advanced Driver Behavior Services" of Qualcomm. Vos Logistics has a fleet of 1200 trucks in thirty locations.

COMPLETE IN THE GOOD DIRECTION

The benefits of EutelTRACS are there for managers, planners and drivers. The on-board computer collects all the data from the vehicle and driver and sends it over a secure satellite connection to the office where it is further processed by the Fleetvisor information portal. You can follow in real-time the location of each vehicle and the actions the driver undertakes. EutelTRACKS also means safe and secure communication between the driver and the office. The on-board computer is equipped with a user keyboard and a clear display that is adapted for use in trucks. You can effectively communicate new loads or road conditions such as traffic jams with your driver, even coaching him if the situation calls for it. Also the engine performance and fuel consumption can be monitored thereby reducing costs and contributing to a sustainable business. Because EutelTRACS is connected to the tachograph and the FMS/CAN bus, the system also contributes to compliance with labor decisions. EutelTRACKS can be extended with different FleetVisor services which gives you more data about your vehicle, driver, trailer and cargo. The extensiveness of EutelTRACS allows you to analyze strengths and weaknesses of your company and thereby making it more efficient.

Transport Haessaerts – some pictures of the installation
